

## A b s t r a c t

With the collapse of the big financial institutions in recent weeks, the system of the economy is changing from primitive to innovation.

The new paradigm shift from gas and oil to data, software, information and blockchain will overhaul the entire banking system.

The future of money is already visible in the now and the only way for you not to miss the great technology that is accessible to all is to start now to position right.

## I N T R O D U C T I O N

Just like the previous Bull Run, the next bull event will have the largest kind of gains come out of these five sectors namely:

**BLOCKCHAIN TOKENS**

**GAMING TOKENS**

**MEMECOINS**

**PPR- PAYMENTS PRIVACY TOKENS.**

The number 5 sector is “Unknown” and this is due to the unpredictability of the crypto space. You might think you are knowledgeable enough to understand a little of everything and due to its vastness; it brings out something new that you were not expecting. Therefore, we always make room for surprises. However, what is most important is your ability to catch the right trends with the right amount of information early enough to be positioned and make a lot of money.

If you by any means doubt this, I stated sometime in March before the euphoria of meme coins in April all through to May, what investors and enthusiast should make their main focal points. Those who listened reaped the rewards and yes, WE MILKED IT.

# POLKACITY

(POLC) | \$0.028

Polkacity is a project aimed to revolutionize the ownership of virtual assets by introducing protection and perpetual value for virtual assets owners through NFTs; a relatively new type of digital assets that are designed to represent ownership of something that is unique, scarce and cannot be broken down into small quantities (Non Fungible).

Since its inception in 2018, NFTs have been a focal point in the crypto currency and web 3 industry, and polkacity leveraging on the explosiveness of Non-fungible tokens, aims at creating a new business model by integrating the virtual asset economy to the web3 industry.

## TOKENOMICS

Total Supply: 250,000,000 POLC

Team: 10,000,000 POLC (6 months lock, 5% monthly release after the lock period).

Marketing: 5,000,000 POLC (1,000,000 POLC will be released from the beginning, 4,000,000 POLC will be locked and 5% released per month).

Platform: 200,000,000 POLC (50,000,000 POLC will be released from the beginning with 150,000,000 POLC locked and 25M released every 3 months)

Uniswap liquidity and Exchange listings: 25,000,000 POLC

Private-Sale: 2,500,000 POLC (1 ETH = 20,000 POLC)

Pre-Sale: 7,500,000 POLC (1 ETH = 15,000 POLC)

- Market capitalization: \$2,410,406.
- Circulating supply: \$83,373,544
- Fully diluted market capitalization: \$7,227,731.
- ATH: \$2.83
- ATL: \$0.01388

*Shifuwealth*

# ROADMAP

Polka city is an ERC20 contract-based solution running on the Ethereum Network. However, the roadmap states that it will become a multichain leveraging solution.

The multichain implementation consists of a solution that aggregates decentralized cross-chain trades. It will enable the polkacity ecosystem to become an Ethereum/Polkadot multichain solution.

The outlines of the roadmap consist of:

Q1	Q2	Q3	Q4
Project Launch	Mobile app release	Polkadot integration	Polkadot Integration
Defi & NFT platform launch	Website V2 & Polkacity wallet release.	High Volume CEX listing	High volume CEX listing.
Private sale	NFT edition release	Polkacity Trading marketplace & Customizable NFT release	Polkacity Marketplace.
Public sale	Referral platform release.	Polkacity profit sharing release.	

## TEAM & PARTNERSHIP

The Polka City team goal is for Polka City to run without the need of human intervention, therefore making sure investments and payment are 100% secured.

### Team Members;

#### CARMELO MILIAN (SOFTWARE DEVELOPMENT)

Over 30 years' experience in IT Service Management. Served as Senior Operations Consultant for Microsoft Latin America and North America. Currently Co-founder and President of One Cloud.

#### FATIH ATALI (MARKETING ADVISOR)

5+ years' experience in cryptocurrency. High physics engineer worked on many blockchain projects. Currently Co-Founder of BGF (Blockchain Game Factory.)

#### MURAD ALIYEV (TECHNOLOGY MANAGER)

5+ years' experience technology infrastructure project and cryptocurrency enthusiast.

#### MANUEL LEAL (DEVELOPER)

Blockchain and Cryptocurrency developer expert with over 10 year's development experience.

The external partnerships of the ecosystem is noteworthy and eye brow raising. Some huge tech firms see the need to collaborate with this great ecosystem to create a world of digital reality. It does not get better than that.

*Shifuwealth*

## SOME OF THESE PARTNERS INCLUDE:

## COMPETITIVE ADVANTAGE:

One of the major advantages of the polkacity ecosystem is the VIRTUAL ASSET OWNER LICENSING BENEFITS PROGRAM. This can be briefly explained as the “OWNERSHIP ADVANTAGE” or so I will like to call it because with all deals and possession records of the NFTs transferred to the Ethereum network, the first virtual resources proprietors will be able to see all exchange records continuously.

POLC Virtual Asset owners will be able to trade assets in the POCL City Market or straight via exchanges that will sell POLC and POLC NFTs. All POLC virtual asset owners will earn POLC cryptocurrency periodically.

Concisely, POLC NFTs are limited and their ownership becomes a profitable investment for its holders. A more interesting side to this ecosystem is the combination of the store and marketplace in one place called the “POLKACITY MALL”. You can see what it is really about here: [PolkaCity](#)

## PRICE POTENTIAL& INVESTMENT RECOMMENDATION:

As at the time of putting this article together, the price of polkactiy was within the range of \$0.028 per POLC, its ATH was at \$2.83 and it is possibly 90% down from its ATH.

The potential embedded in its ecosystem coupled with the limited supply will see this particular project catapult to even higher numbers per coin in the near future.

Let us be practical.

At ATH, the price of the project was \$2.84 and that gives a fully diluted market cap of \$707.5m, which is still under a billion-market cap yet. That will further stipulate that the room available for growth of this project is beyond enormous.

The potential of this project coupled with the utility and the relevance it brings to the web3 and crypto space, it is inevitably a top 50 project in due time.

Summarily, there is no better time to buy than now.

WHY?

At its ATH, it is below the billion-dollar valuation in its market capitalization and that is exactly 100x from current price. You see where I am going with this.

## EXCHANGES:

POLC is listed on both centralized and decentralized exchanges below:

UNISWAP

PANCAKESWAP

KUCOIN

GATE.IO

MEXC

LATOKEN

*Shifuwealth*

# BABBS

(BAX) | (\$0.00053)

Economics is omnipresent and forms an integral part of our lives. BABB is the decentralized bank for the integral part of economy (micro) aiding individuals and businesses with a UK bank account, powered by blockchain technology.

The account works through a smartphone app and provides access to decentralized utilities such as payment card. In addition, partnerships with central banks allow for the integration and issuance of other digital currencies around the world, further stimulating local micro-economies and expanding the reach of the BABB solution and its underlying BAX token.

## ROADMAP AND TOKENOMICS:

As highlighted above, the project has been established as a solution provider, providing decentralized services for both the banked and unbanked with other utilities and real cases embedded. This is the outline of the roadmap below:

PHASES	DESCRIPTION	DATE	ACTION
Phase 1	Connect	QUARTER 2 (2019-2019)	This phase focused on building the technical infrastructure of the BABB platform, including the development of the BABB app, the integration of banking APIs, and the creation of a cryptocurrency wallet. During this phase, BABB also conducted a successful ICO, raising \$20 million to fund the project.
Phase 2	Regulate	QUARTER 3 (2019-2020)	In this phase, BABB worked to obtain regulatory approval for its banking and financial services in the UK and other countries. The company also focused on expanding its team and building partnerships with other organizations in the blockchain and fintech industries.
Phase 3	Globalize	QUARTER 4 (2020) QUARTER 2 (2022)	The goal of this phase is to launch the BABB platform in multiple countries and expand the range of financial services offered to users. BABB plans to collaborate with local organizations in each country to provide localized banking services and ensure compliance with local regulations.

Phase 4

Disrupt

QUARTER 2 2023  
–  
QUARTER 4 2023

In this final phase, BABB aims to become a major disruptor in the global banking industry by leveraging blockchain technology to provide fast, secure, and low-cost financial services to a wide range of users. The company plans to expand its product offerings to include lending, insurance, and other financial services, as well as integrate with other blockchain projects

### TOKENOMICS :

Total supply: 50 BILLION

ICO DISTRUBUTION (2018): 30 BILLION

TEAM, ADVISORS, PARTNERS AND BOUNTY: 20 BILLION.

MARKET CAPITALIZATION: \$17,695,615

FULLY DILUTED MARKET CAPITALIZATION: \$56,786,064

CIRCULATING SUPPLY: \$32,900,000,29

ATH: \$0.0029

ATL: \$0.00000000604

### TEAM AND PATNERSHIP:

The BABB team collaborates with one of the best the space offers. The realistic nature of the project and its ecosystem, make it simply irresistible to any fortune 500 company looking from outside. Some of these partners include:

**Clear.Bank®**

**LHV**

**SYGNUM**

## COMPETITIVE ADVANTAGE:

The BABB ecosystem will thrive in the coming years and it is for this one simple reason: real case uses and scenarios. The ecosystem is as realistic as it gets and it is provide solution to anyone challenged in the aspect being unbanked.

Here is some of the added advantage of been an early investor in the BABB ecosystem:

- **STAKING AND GOVERNANCE:** Investors can stake and making informed decisions as an early adopter of the ecosystem.
- **ACCESS TO BANKING AND FINANCIAL SERVICES:** BAX is used to access a wide range of banking and financial services on the BABB platform. Users can use BAX to pay for transaction fees, access premium features, and earn rewards through the BABB loyalty program.
- **TOKEN BURNING:** BABB has implemented a token burning mechanism to help control the supply of BAX tokens. A portion of the transaction fees collected on the BABB platform are used to purchase and burn BAX tokens, which helps to reduce the overall supply of tokens in circulation and increase the value of remaining tokens.
- **REWARDS AND LOYALTY PROGRAMS:** BAX holders can earn rewards and bonuses through the BABB loyalty program, which incentivizes users to hold and use BAX tokens.

## PRICE POTENTIAL& INVESTMENT RECOMMENDATION:

According to the roadmap as stated above, BABB is in its disruptive stage which means it is about to take the world by a storm. There is a correlation of the present brain drain in the African continent and Africa being a major part of the cryptocurrency and web3 industry.

The BABB ecosystem can provide financial solutions to individuals that just moved into Europe and have difficulties been banked.

The present prices does not tell the whole story of how disruptive this ecosystem can get by 2025.

The utilities gives room for more partnerships with international bodies create adoption within a short space of time and that helps with price action. \$0.00053 with a market cap of just \$17m can easily see a 100x from current prices and that is a tip of the iceberg.

You can see the website for more information that can boost your confidence in delving into the ecosystem: <https://getbabb.com/>

**EXCHANGES:** BAX is seen on exchanges like

- KUCOIN
- BITTREX

## XOR (SORA) | \$2.74)

Have you ever thought of a decentralized central bank that uses a smart algorithm to create monetary policy? In addition, the bank can be accessible to everyone. Yea, that is SORA.

SORA is building a global currency called XOR that anyone, anywhere can use. It seeks to create an automated central banking system that is not deflationary or inflationary and its supply is dependent on the economy situations.

### ROADMAP AND TOKENOMICS:

transaction speeds and reduce costs.	
DATE (PHASES)	ACTIONS
<ul style="list-style-type: none"><li>Chainlink - A decentralized oracle network that is collaborating with Sora to provide accurate</li></ul> (Q2 2018 - Q3 2019)	This phase focused on building the technical foundations of the Sora platform, including the creation of the Sora network, the Sora app, and the Sora wallet. During this phase, Sora also conducted a successful ICO, raising over \$10 million to fund the project.
(Q4 2019 - Q4 2020)	In this phase, Sora aims to expand the use cases and applications of the Sora platform, including the creation of decentralized applications (dApps) and the integration with other blockchain networks. The company also plans to launch a decentralized exchange (DEX) and a governance platform to enable community participation in decision-making.
(Q1 2021 - Q3 2022)	The goal of this phase is to accelerate the adoption and growth of the Sora ecosystem, including the launch of the Sora X platform, which will provide a suite of financial tools and services for users.
(Q4 2022 - Q4 2023)	In this final phase, Sora aims to become a fully decentralized network, with a community-driven governance model and a wide range of dApps and services running on the platform.

## TOKENOMICS:

TOTAL SUPPLY: XOR supply was 350,000 XOR until April 2021, when the SORA v2 network launched.  
MARKET CAPITALIZATION: \$8,751,756  
FULLY DILUTED MARKET CAP: \$8,751,756  
ATH: \$981.8  
ATL: \$0.085

Sora's tokenomics also include a mechanism called "Democracy 2.0," which allows users to propose and vote on decisions related to the platform's development and direction. This allows for a more democratic and decentralized governance model, giving users a greater say in how the platform evolves.

Overall, Sora's tokenomics is designed to create a self-sustaining ecosystem that rewards early adopters, contributors, and governance participants while maintaining the value of the token over time.

## TEAM AND PARTNERSHIP:

The sora ecosystem consist of some of the notable web3 experts that have a record of accomplishment of innovation, utilization of resources and community prioritization and this goes further to prove in the partnership and relationships they have built with organizations and web3 companies.

The team consist of:

- Makoto Takemiya - CEO and Co-Founder
- Ikkei Matsuda - CTO and Co-Founder
- Yasuhiro Seo - Lead Developer
- Yuki Ikeda - Developer
- Taiga Maekawa - Developer
- Yuta NAKAMURA - Developer
- Akihiro Yamase - Community Manager
- Eri Ono - Business Development Manager

In addition, some of the notable partnerships are:

POLKADOT	Sora is built on the Polkadot Substrate framework.
Brave New Coin	A market data and research company that provides Sora with market insights.
CELER NETWORK	A Layer-2 scaling platform that is collaborating with Sora to improve transaction speeds and reduce costs.
CHAINLINK	A decentralized oracle network that is collaborating with Sora to provide accurate data feeds.
SORAMITSU	A blockchain company that is collaborating with Sora to develop a decentralized digital identity solution.

## COMPETITIVE ADVANTAGE:

Sora's integration with traditional finance, support for multiple asset types, decentralized governance model, innovative tokenomics, and focus on usability give it a competitive advantage over other cryptocurrencies and blockchain projects.

Sora's platform supports multiple asset types, including cryptocurrencies, fiat currencies, and other digital assets. This allows for a more diverse and comprehensive financial ecosystem, enabling users to easily exchange and transfer different types of assets.

Sora's governance model is fully decentralized, giving users a greater say in the direction and development of the platform. This allows for a more democratic and community-driven approach to decision-making.

### PRICE POTENTIAL AND INVESTMENT RECOMMENDATION:

With the supply not at a fixed number, as the project is structured based on the influx of the web3 wave and vice versa. Notwithstanding, the injection of projects into the web3 space in the past 12-24 months will definitely see XOR soar into more than a billion and even beyond and you know what it will mean for the price action.

As usual, this is not a financial advice, as Investors should also consider their own risk tolerance, investment goals, and financial situation before investing. It is always advisable to invest only what you can afford to lose and diversify your portfolio to mitigate risks.

Presently, sora is at \$2.74 and its ATH was \$981 in 2021. With a market cap of just a little over 8m, this is a no brainer but again always DYOR.

### EXCHANGES:

XOR tokens are seen on the following exchanges and markets:

GATE.IO

HOTBIT

POLKASWAP

UNISWAP (DECENTRALIZED EXCHANGE).

## SHINA INU

(\$0.00000216)

Shina inu is a decentralized cryptocurrency that runs on the Ethereum blockchain. A community-driven project that aims to create a decentralized ecosystem for enthusiasts. Here are some key features of the Shina Inu token.

## ROADMAP AND TOKENOMICS

The roadmap of the shina ecosystem is:

February 2022:

Token creation, Website creation, social media created, initial whitepaper written.

Mar, 2022 Mint First Batch of NFTs

Apr, 2022 Liquidity Pool NFT Burned

Apr 2022 Dev Wallet Burned (-19% Supply)

Apr, 2022 Meme Contest

Apr 2022 List on Etherscan, Coin Gecko, etc.

Apr, 2022 Shina Bots Created

May, 2022 Shina Store Open for Business

Aug, 2022 Charity Burn Mechanism Proposal

Feb, 2023 Listed on Trust Wallet

Jun 2023 Shina Bots Open to the Public

Jun, 2023 Charity Burn Mechanism

Nov, 2023 Shinoshi Charity

### TOKENOMICS:

TOTAL SUPPLY: 14,482,056,376,677

MARKET CAPITALIZATION: \$28,795,161

CIRCULATING SUPPLY: 14,074,133,211,212

FULLY DILUTED VALUATION: \$40,919,267

ATH: \$0.00000360

ATL: \$0.000000102003

## COMPETITIVE ADVANTAGE:

Shina Inu aims to create a unique and engaging ecosystem for crypto lovers and enthusiasts, with a strong focus on community, charity, and philanthropy. While it is still a relatively new project, it has the potential to carve out a niche in the crowded and competitive cryptocurrency market.

Shina Inu is a community-driven project, which means that volunteers who work on various aspects of the project primarily run it. This approach can help to create a strong and engaged community that is invested in the success of the project.

Shina Inu has implemented a liquidity provision mechanism that helps to ensure the availability of liquidity for SHINU tokens on various cryptocurrency exchanges. This can help to increase the liquidity and trading volume of SHINU tokens, making them more attractive to investors and traders.

## PRICE PROJECTION AND INVESTMENT RECOMMENDATION:

A community project always have a lot to prove to especially doubters. In recent years in the crypto space, it has been seen that community projects have been overlooked until the emergence of dogecoin and shibainu token.

Investors are beginning to see the possibilities of a particular community driving the potential of their project to create massive adoption and this is where shina is heading.

The icing on the cake is the philanthropy and charity use cases that have injected into the ecosystem and this even makes the adoption and belief of community members and early adopters stronger to see price action blow over the roof in recent years.

EXCHANGES: The shina token is seen on these exchanges listed below:

UNISWAP (DECENTRALIZED EXCHANGE).

# CRYPTO WITH A CONSCIENCE

## DREAMCHAIN

(\$0.056)

*"Investors in a dream project can sleep easy knowing that they are part something great"*

Words that can make any investor not have a rethink before investing but hey, talk is cheap yh? Then let us go practical.

The dreamchain project (\$DREAM) is on a mission to support the integration and growth of the greatest crypto projects in the world.

The Holders of the \$DREAM token get exclusive access to newly issued projects before the public.

Most of the value generated within the \$DREAM ecosystem is used to fund the repurchase and burning of the \$DREAM token to reduce total and circulating supply; thereby increase in price action and value overtime.

The Dream ecosystem is home to the Dreamlabs Community, a group of developers, investors, and enthusiasts who are working to build and grow the platform.

The Dreamlabs Community provides resources and support to help developers build decentralized applications (dApps) on the Dream Network, and organizes events and meetups to bring together members of the community. Dream Token are part of a broader trend towards decentralized finance (DeFi), which aims to create a more open and transparent financial system that is accessible to everyone.

Some of these dApps (Decentralized applications) include:

Details on what these different networks entail is seen here: [Projects ★ DREAMLABS](#)

## ROADMAP AND TOKENOMICS:

The Dream Token roadmap is to outline of plans for the development and growth of the Dream Network and ecosystem and the adoption of the Dream Token. This includes milestones such as the launch of new features, partnerships with other blockchain projects, and the integration of the Dream Token with other DeFi protocols.

As the integral part of the dreamlabs community that provide resources and support to build these decentralized applications as listed above, 80% of the plans and visions embodied with Dream ecosystem has been achieved and moving forward, the team is not slowing down on providing more use cases and utilities that will the ecosystem birth more to drive massive adoption.

Some of the projects already established in details, is seen here: [Projects ★ DREAMLABS](#)

The Dream ecosystem focal point is to power the Dream Network, a decentralized platform for creating and participating in peer-to-peer financial markets. Users can stake Dream Tokens to participate in the network and earn rewards.

The tokenomics include:

TOTAL SUPPLY: 100,000,000

FULLY DILUTED VALUATION: \$5,661,518

ATH: \$0.186471

ATL: \$0.00003655

Distribution of the token are as follows:

TOKEN	BENEFICIARIES	PERCENTAGE/AMOUNT
DREAM TOKEN	TEAM & ADVISORS	20%
	RESERVES	15%
	BRANDING, MARKETING & PARTNERSHIPS	15%
	TOKEN SALE (PUBLIC)	50%

## COMPETITIVE ADVANTAGE:

The dream chain ecosystem has an ERC token and as such, it is no news that the chain has a high cost transaction challenge but this is not the case with dreamchain. One of the major competitive advantages this project has over others is the low transaction fee, bearing in mind the kind of chain it is built on.

Having said that, some of the competitive advantages of this project are listed below:

- **CONSISTENCY:** One of the major problems in the crypto space in recent years is the ability of certain projects to stay sustainable until the end. The dream chain ecosystem has a focal point on utilities and services being delivered to keep the project, its ecosystem and community afloat. It is designed to be efficient and community friendly. With the proof of stake consensus, it consumes less energy, making energy effective.
- **ACCESSIBILITY:** The Dream Network aims to provide a more accessible and user-friendly way for people to invest in the web3 space, by removing intermediaries and reducing transaction costs, the platform is intended to make it easier and more affordable for anyone to participate in DeFi.
- **SCALABILITY:** The network is designed to be highly scalable and efficient, allowing users to transact with minimal fees compared to other DeFi platforms.

Dream is an incubator that focuses on only Value Investing Projects which is the business model that will pioneer the next bull-run.

The team gets a % share of token Allocations in every incubated project which is only sold in parts as the project matures and the funds are used to buyback Dream on the market, causing more Supply shock + Price increase.

## INVESTMENT RECOMENDATION & PRICE PREDICTION:

The total supply of this token via the tokenomics presented is 100million. I.e. it is 100m dream token will ever be available. The practical aspect of these goes without saying the fact that the price of the dream token will skyrocket over time. Here is why I am saying this:

The projects outlined and even executed on the network with various decentralized applications building on it and its ever community-focused utilities, the price of this token is only a matter of time.

The high scalability, low cost transaction regardless of the chain it is built on, energy and environmental friendly concerning the proof of stake consensus and accessibility, makes you wonder why you have not invested yet in this revolution.

Its current prices of 0.05 gives room for more growth even beyond its ATH of 0.186 when it hits mainstream. When utilities are doing the talking, you do not have to convince investors to trust you with their funds. Summarily the likely outcome for price prediction in the over the next weeks to months is seen as:

- 20x – 40x Weekly based.
- 80x – 100x Monthly based.

This is a 100% based buy enough to qualify you for future Allocations regardless of you taking profit on its way up.

## EXCHANGES:

The dream token is a decentralized oriented and as such, it is listed on mostly DEXes. However, centralized exchanges listings are in the pipeline and when it is time for mainstream, it will be listed on top tier exchanges like binance and coin base.

It can be bought on UNISWAP with the (DREAM/WETH) pair.

SUMMARY:

The secrets of the future of web3 and the crypto currency space are hidden in the details of today. When you seek the right information, it can answer to all the questions you have on financial stagnancy and why you have not been making insane gains in this industry, well until now.  
Stay positioned and let your future be grateful for that decision.
